

Over one million licences in the field and market leader in the niche – estos is both an innovation driver and a proven constant in the ICT market.

Since 1997, we have been developing **Unified Communications (UC) & CTI software** on the subject of communication for companies. The basis for this success is our ability to recognize emerging trends in advance and to shape them at an early stage with innovative products.

estos enables easy communication

The dialogue between people is the basis of all business processes. Communicating easily with each other is both a need and a necessity.

The rapid digitization of all areas of life is presenting companies in Europe with major technical, legal and organizational challenges.

What remains unchanged is the desire to provide superior satisfaction to customers and partners.

Communication for medium & large companies

ProCall Enterprise

Unified Communications
& CTI Software Suite

ixi-UMS Enterprise

Unified Messaging
Server Software

Medium-sized companies: *50 to 249 employees*

Large companies: *250 or more employees.*

ProCall Enterprise – unified communications & CTI software suite

Flexible workplace and working time models as well as the rapid digitization of all areas of life are presenting companies in Europe with ever greater technical, legal and organizational challenges. With its **proven UC features** and **business process integration** capabilities, ProCall Enterprise has been reliably simplifying communications and business processes for almost 20 years. **Communication needs to be simple**, especially in a time of complex digital transformation.

Unified messaging with ixi-UMS Enterprise

ixi-UMS Enterprise is designed as a **modular** unified messaging software for larger companies or special requirements in customer projects and integrates the functions **fax, voice and SMS** in system environments such as Microsoft Exchange, HCL Domino or SAP. Additionally, ixi-UMS Enterprise offers **mobile access to all messages**.

Communication for small companies

ProCall One R2

Classic CTI functions for the single workstation

ProCall Business

Classic CTI and selected UC functions

ixi-UMS Business

Unified Messaging Server Software

Micro companies: *less than 10 employees;*

Small companies: *10 to 49 employees;*

ProCall One R2 for micro companies < 10 users

ProCall One R2 is the new office productivity software for single workstations, small offices and home offices. It supports communication via e-mail and telephone. ProCall One R2 also offers all users integration with Bluetooth in smartphones and Bluetooth-enabled mobile phones.

ProCall Business for small companies 10 – 49 users

Company communications, both internal and external, are becoming increasingly diverse. With **classic CTI and selected UC functions**, ProCall Business offers small company users flexibility for their day-to-day work. Whether from the workplace or on the road, via PC, laptop, tablet or smartphone – **ProCall Business combines important communication channels in a single application.**

ixi-UMS Business

The unified messaging server ixi-UMS Business is a complete solution that integrates **fax, voice and SMS** services in system environments such as Microsoft Exchange or HCL Domino. ixi-UMS Business is aimed specifically at companies with **up to 100 employees** and excels with its ease of commissioning and use.

Extensions

ProCall Analytics

The analysis tool
for ProCall Enterprise

MetaDirectory

LDAP server for access
to contact data

ECSTA

Professional CTI and
TAPI middleware

LiveChat

Software for
video consulting

ProCall Analytics

is an add-on module for ProCall Enterprise that displays your **communication data in clear dashboards**. In this way, you get a quick overview of potentials and bottlenecks in communication-intensive processes and are able to make better decisions.

MetaDirectory

merges disparate databases into a single, company-wide, consistent LDAP directory. This makes relevant data such as telephone numbers and other contact data available to all employees in the company. The intelligent preparation of the data enables a simple search and the quick presentation of the results – even with large data sets.

ECSTA Series

as **middleware** enables the communication between your telephone system and the Microsoft Windows world. By **converting the system protocol CSTA into the Microsoft TAPI standard**, numerous added values for improved communication are created.

LiveChat

expands the classic ways in which a prospective customer can get in touch with a company to include **interactive touchpoints**. Via the **website widget**, the **contact portal** or the **multimedia business card**, the employees of a company can be easily reached by digital means.

UCConnect – complementary online services

ProCall Meetings

Simple online meetings
and video conferencing

Mobility Services

Commissioning
of ProCall apps

UCConnect

is estos' own platform for the cloud. The **online services** available via UCConnect facilitate the **commissioning of the app** or enable the simple organization and **holding of online meetings and video conferences**.

ProCall Meetings

This service helps companies enable productive collaboration via **online meetings and video conferencing**.

As an **add-on to the unified communications & CTI software suite ProCall Enterprise**, ProCall Meetings makes it easy to organize and hold online meetings and video conferences.

Mobility Services

These services help companies communicate and collaborate optimally while on the move.

ProCall Mobile is a native app for iOS and Android with selected **unified communications and CTI features** such as video chat or the integration of softphone functions (SIP).

Communicate anywhere

Employees in the company or in the home office    Employees on the move

 Prospective clients, partners or customers via the website

Employees in the company or working from home and employees on the move communicate with each other within the company or externally with business partners and customers via the native clients of Windows, macOS, iOS and Android. **Prospective customers, clients, or partners** can contact a company employee directly via the internet using the contact portal and multimedia business card.

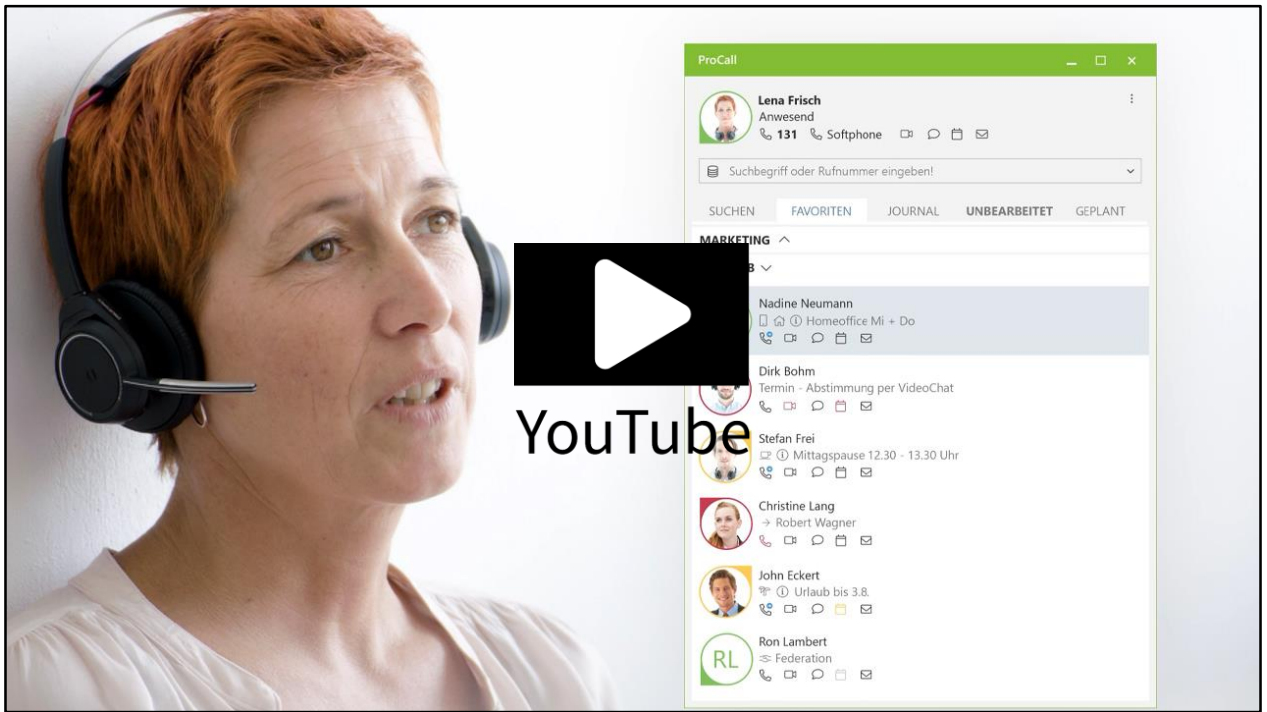

Digitization offers a great opportunity to make work processes and conditions more flexible.

The workplace and therefore working hours are in a state of transition. Mobile working, e.g. while traveling and/or working from home, has supplemented or even replaced the fixed workplace in the office in many areas. ProCall 7 Enterprise with its presence management offers the basis for flexible workplace and working time models of tomorrow.

Presence management, which has occupied us for more than 15 years and for which we received the **German Innovation Award in 2018**, is the core of our application. Here, we have paid particular attention to the presentation of information, the **use of colors and a modern appearance**.

Show presence

Present

Busy

Do not disturb

Inactive

Absent

Not logged in

In the **presence area** of ProCall Enterprise, the focus is on the **round display of the profile pictures**, which also leads to a change in the display of presences. Green stands for "Available", red stands for "Busy", or red/white for "Do not disturb", yellow/green for "Inactive", or yellow for "Absent" and gray for "Not logged in".

The various presence states can also be linked to actions such as call forwarding or DND functions.

6d CAP

The alignment of the "crown" on the profile picture explains the color of the presence ring for people with a handicap and therefore the presence state

4 Directions = 4 Colors

Large image

Profile picture surrounded by a presence ring with CAP

Medium image

Presence ring with CAP

Small image

Colored circle =
Missing in the presence ring

The new design of the presence information as a colored ring with directional arrows, the so-called "CAP", enables intuitive detection of the availability of a person even for people with color vision deficiencies.

The contact card

Nadine Neumann

   Homeoffice Mi + Do

In addition, today's users of professional software expect a modern appearance that corresponds to user habits, which are conveyed from privately used applications, and enables daily teamwork, even at mobile workstations or working from home. The contact card displays **all relevant information about the availability of a contact** and is therefore the linchpin of **communication**.

The contact card: Important information at a glance

Action area

Managing communication
and cooperation

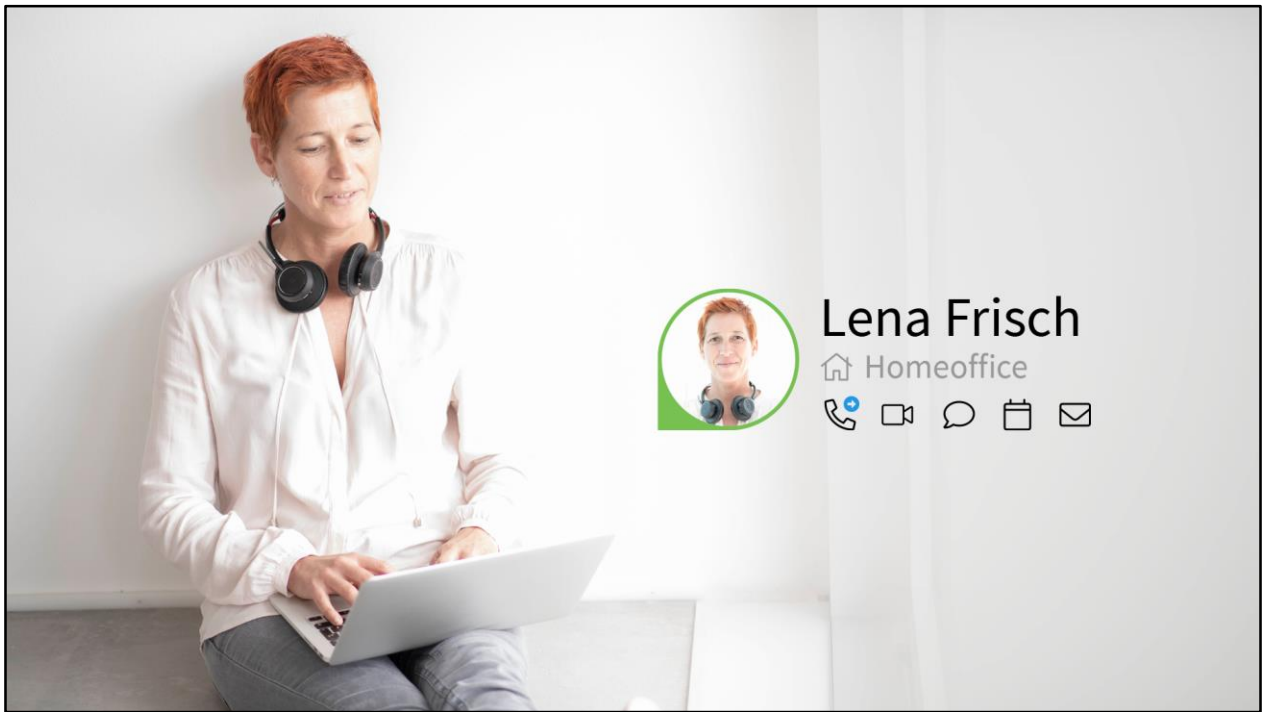

The contact card as a central and compressed element of communication, is divided into three sections in the new version of ProCall Enterprise – the **Presence area**, the **Information area** and the **Action area**.

The tooltip: All information at a glance

The image shows a contact card for Nadine Neumann. A mouseover tooltip is open, displaying detailed information. The tooltip is divided into three sections:

- Presence area:** Shows the contact's name, status (Available), and location (Homeoffice Mi + Do).
- Information area:** Lists mobile availability, home office location, and home office working hours (We + Th).
- Action area:** Lists communication channels (Forward all calls to (433), Softphone (433)), appointment information (Next appointment: 14:30 - 15:30), and location (Starnberg).

A mouseover opens the **tooltip** with more detailed information. This is also divided into presence, information and action area and shows all elements of the contact card in a detailed display.

Communicate **easily, securely and independent of location**, even at home. To ensure that your company communication doesn't suddenly stop when you leave the office, ProCall Enterprise offers you a wide range of options for your home office workplace.

Individual settings

Nadine Neumann

🌴 Vacation 1.8. - 14.8.

The information area contains detailed information about the current work context of the selected contact. With the new version, the presence management system enables the configuration of directly selectable presence profiles such as **home office**, **vacation**, **business trip** or **break**. In this way, predefined presence states, specific note information or call forwarding can be activated with a single click. These presence profiles – once set up – can be activated from both the computer and the mobile device. The notification field offers the option of describing the current availability in even more specific terms.

Presence information can also be changed automatically by integrating the calendar.

Integration of individual calendars

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY

Nadine Neumann

Appointment - ProCall 7 Enterprise

Nadine Neumann

business trip Berlin

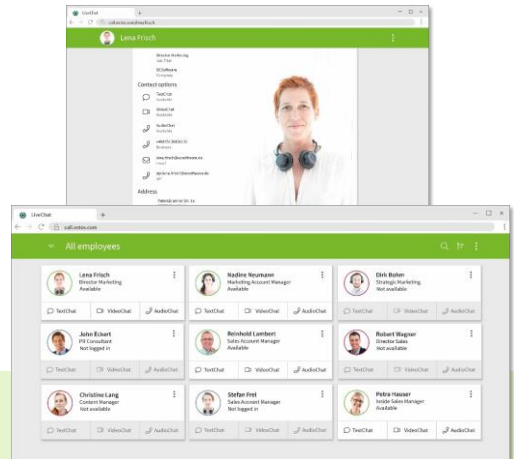

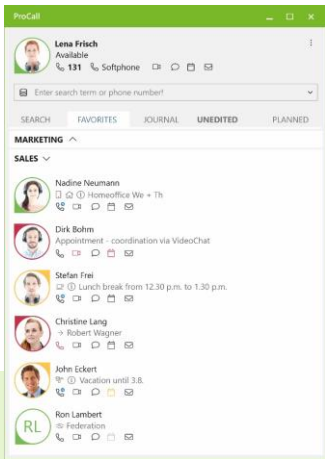

Due to simple integration into the groupware, the calendar can also have a direct influence on the presence displayed in ProCall Enterprise. In this way, normal appointments automatically cause the presence to be set to red "Busy in appointment". At the same time, as far as the permissions allow, the subject of the appointment is also displayed in the information area.

If an appointment is set to absent in the calendar, this leads to a yellow presence "Absent in appointment". This is often linked to automatic call forwarding to the mobile phone or mailbox.

No matter if I am in the **office**, **at home** or **on the move**. Thanks to simple representation of the reachability through colors, pictograms and notification, it is immediately clear where the contact is at any moment and how to best reach them – regardless of the currently used client (**Windows**, **macOS**, **iOS** and **Android**).

Available everywhere

Employees in the company or in the home office    Employees on the move

 Prospective clients, partners or customers via the website

Through Windows, macOS, iOS and Android clients, availability becomes transparent for employees and colleagues. Thanks to the contact portal, this also applies to interested parties, customers or partners.

This enables quick and easy clarification of the **availability** of a contact and is the ideal information basis for choosing the most **appropriate communication channel**. The issue of transparent availability of a person is a very important aspect of customer satisfaction.

When I communicate across many channels, I want to use an application that brings these channels (e.g. voice, video, chat, content, etc.) together and integrates them with relevant business applications to facilitate my interaction with colleagues, business partners and customers. With ProCall 7 Enterprise, I use an application that offers me **all relevant communication channels under one interface.**

With ProCall 7 Enterprise I can communicate via **telephone**, **SIP**, **audio/video** or **text chats**. For example, through integration of Outlook, I can integrate **calendar functions** or **e-mail**.

My communication channels at a glance

My ProCall client

My missed communication

My name

Lena Frisch

My note

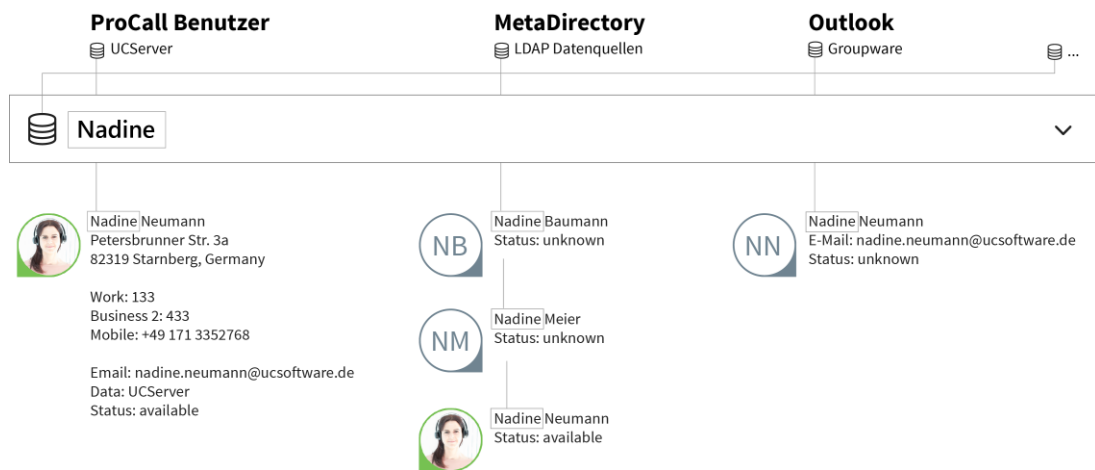

Monday home office

My communication channels

- 131
- Softphone** (Default line)
- Bluetooth
- Audio/Video communication
- Chats
- Calendar
- E-mail

In the "My presence" area of the ProCall Enterprise client, **all available communication channels** are displayed in addition to your own presence with note and name. The so-called "bubble" signals all missed calls as well as all unread chats and e-mails. Clicking on the corresponding pictogram opens the respective communication journal.

Quick search for contact details

Contact data is essential for professional communication. With the search integrated in the ProCall Enterprise clients, not only can other **ProCall users** be found, but other external data sources can also be searched. This includes, for example, contacts from **groupware solutions** such as **Microsoft Outlook**, **HLC Notes** or **Google Workspace**, as well as contact information from connected **ERP/CRM/industry solutions** through the use of **estos MetaDirectory**.

This search is available in all estos ProCall Enterprise clients (**Windows**, **macOS**, **iOS**, **Android**).

Optional: Connection of contact data with MetaDirectory

DATA

Connection of all company distributed contact data sources

MetaDirectory

LDAP server for fast access to contact data

INFORMATION

Multiple display and access options to the consolidated data stock

MetaDirectory merges **different databases** into a single, company-wide, consistent **LDAP directory**. This makes relevant data such as telephone numbers and other contact data available to all employees in the company. The **intelligent preparation of the data** enables easy searching and quick presentation of the results – even with large data sets.

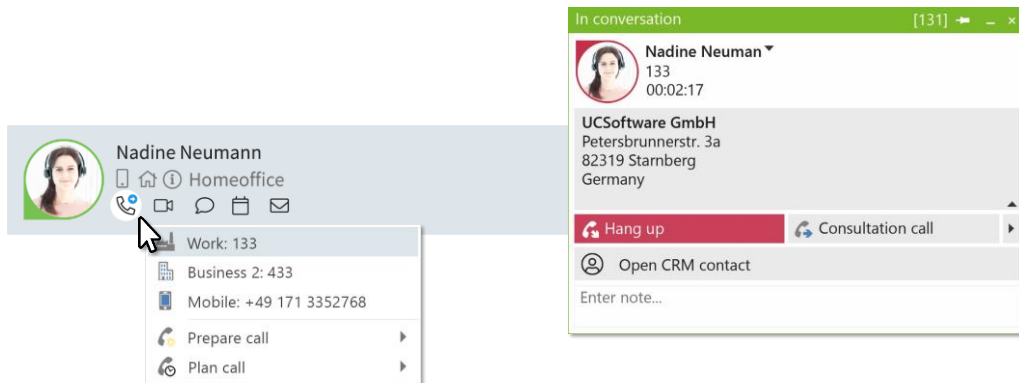

MetaDirectory replicates contact data from a wide variety of data sources and **standardizes** them. In the process, telephone numbers are also **automatically normalized**. This provides the basis for a **high-performance search**.

My favorites: Communicate easily and quickly

The screenshot displays the ProCall software interface. On the left, a contact card for Nadine Neumann is shown with her profile picture, name, and status 'Available'. Below her name are icons for Homeoffice, telephone, video chat, chat, and email. A mouse cursor is pointing at the telephone icon. To the right, a larger window shows a list of contacts under the 'SALES' category. The contact 'Nadine Neumann' is selected, and a context menu is open over her name. The menu includes options such as 'Business: 133', 'Business 2: 433', 'Mobile: +49 171 3352768', 'Start Chat...', 'Start AudioChat...', 'Start VideoChat...', 'Send email message: nadine.neumann@ucsoftware.de', 'Send Fax: +49 8151 36856 833', 'Share screen...', 'Request screen share...', 'Open contact details...', 'Website...', 'Open CRM Contact', 'Prepare call', 'Plan call', 'Call forwarding', 'Set presence...', 'Create new contact...', 'Create new journal item...', 'Additional actions', 'Tag for status change alerts', 'Authorisation level: Team', 'Add contact...', 'Add key...', and 'Remove contact'.

The most important **communication channels** such as telephone, video, chat or e-mail can be directly accessed via the **action area**. The **context menu**, which can be called up via a right mouse click, provides many other options for planning or **executing actions** related to the contact.

Classic telephone or SIP softphone

In addition to direct outgoing dialing, classic telephone calls (CTI) or SIP softphone calls can also be **prepared** or **scheduled** for a later call.

The **convenience features** offered by the telephone system used are available for controlling the call.

For easy commissioning and operation, estos offers drivers from the ECSTA series for the systems and end devices of many manufacturers.

Face-to-face via video chat

If workstations are equipped with the appropriate hardware such as headsets and cameras, face-to-face conversations can also be conducted via video chat. In times of remote working and decentralized work, this type of communication is indispensable.

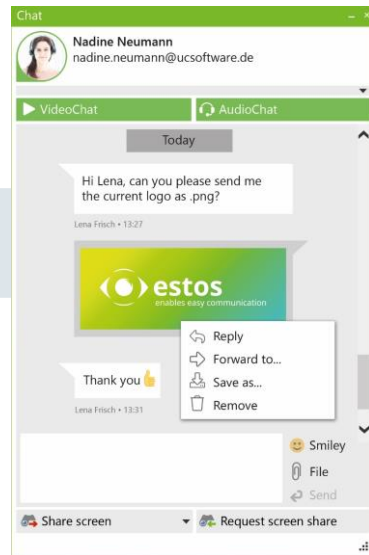

Screen sharing

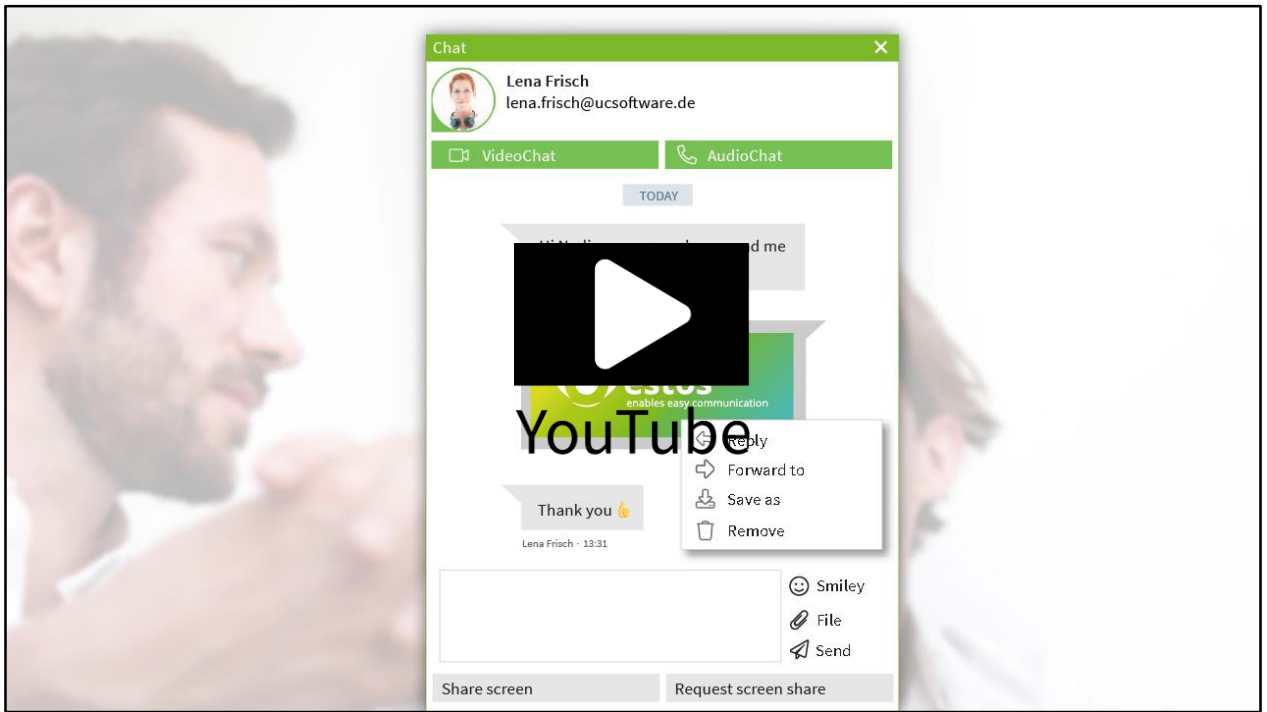

The user's own screen can also be shared for **joint work**. This allows the other party to **see the content displayed** there and, by optionally **sharing control**, it is also possible to **work on documents together**.

This also results in another advantage. **IT** can thus also provide support in the event of a fault and carry out **remote maintenance**.

Text chat: Fast ad hoc communication

Text chat now offers media sharing with important configuration options on the company side. For example, the maximum file size can be set to save bandwidth and server memory. Blacklists for certain files can be used to prevent the receipt of malicious software, and automated or manual data cleansing on the UC server can prevent unwanted data piles from accumulating. Files, photos and videos can be conveniently shared by drag & drop via the chat window. The search function in the text history enhances the chat with something new: The reply/forward function, already established in everyday life.

<https://www.youtube.com/watch?v=AjW5MCXmfB8>
Link to estos YouTube channel by clicking on the slide

Personal journal

The screenshot displays a 'Personal journal' interface. A central overlay lists communication channels and directions:

- Call (Missed)
- VideoChat (Incoming)
- AudioChat (Incoming)
- Chat (Incoming)
- Screen release (Outgoing)

The background shows a list of messages with names, email addresses, and timestamps:

Name	Email	Time
Nadine Neumann	nadine.neumann@ucsoftware.de	13:28
Stefan		12:47
Nadine		11:43
Christine		10:16
Christine Lang	christine.lang@ucsoftware.de	16:05
Nadine		14:23
Stefan		11:17
Christine Lang	christine.lang@ucsoftware.de	10:38

ProCall Enterprise logs communication across all communication channels and presents them clearly in the Personal Journal. Thanks to the pictograms, the entries can be easily distinguished according to the channel used. In addition, the direction of communication (incoming, outgoing) is also displayed and missed communication is specially marked.

The journal can also be filtered and searched.

My communication at a glance

The **personal journal** shows the communication made and missed in chronological order. The communication channel, the communication direction, the name of the call partner, the number/SIP address of the call partner, the duration of the call and the time are displayed.

Send a digital business card

ProCall Enterprise users can send customers and interested parties the link to their digital business card. On this, in addition to the classic communication channels such as telephone numbers and postal address, the current presence is also displayed. In addition, the customer/interested party can also start an audio or video communication directly via the browser.

Optional: Fax, voice and SMS with ixi-UMS

Optionally, ProCall Enterprise can be expanded via estos ixi-UMS to include functions such as fax, voicemail and SMS.

Supports the collaboration of teams and groups

Productive teamwork is the basis for successfully completing complex tasks. ProCall 7 Enterprise supports collaboration within the company with **colleagues** and outside the company with **business partners** and **customers**.

Telephone conference

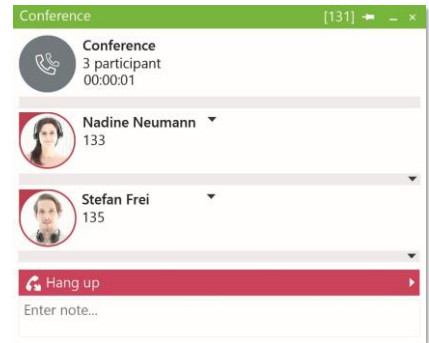

1

2

3

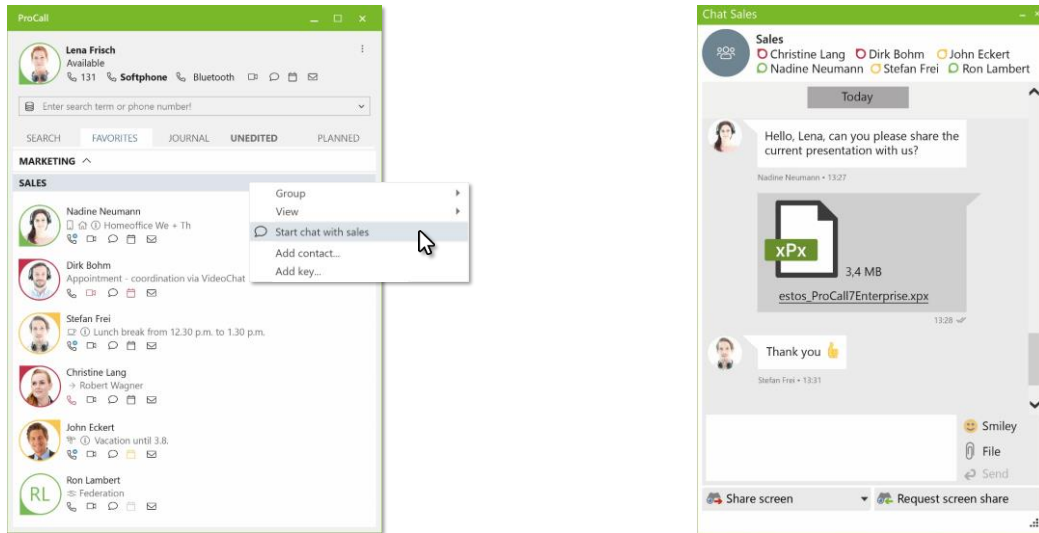

Conference calls with up to three participants can be conveniently initiated in three simple steps.

Active call => click on **Consultation** => select the call partner => click on **Conference**

Note: This function must be supported by the telephone system used.

Group chat: Quick consultation in small teams

A quick exchange of information in small teams is easily possible thanks to the group chat functionality. This is also suitable for sharing documents.

Members can be added to a chat individually. However, this is more convenient via the use of favorite groups.

Optional: Video conference with ProCall Meetings

With the optionally available ProCall Meetings, video conferences with up to 15 participants can be held. ProCall Meetings is integrated into the presence management system of ProCall Enterprise. If a ProCall Enterprise user participates in a video conference, his presence is automatically set to "Busy – In Meeting".

Group journal: Keeping an eye on my colleagues' communication

estos enables easy communication 52

A UC application provides the greatest value when it is integrated as effectively as possible into a company's business processes and workflows. Through **business process integration**, ProCall 7 Enterprise can be coupled with ERP/CRM or industry solutions. Until now, integration in ProCall Enterprise was complex and required programming skills. Now, with ProCall 7 Enterprise, getting started with business process integration has never been easier.

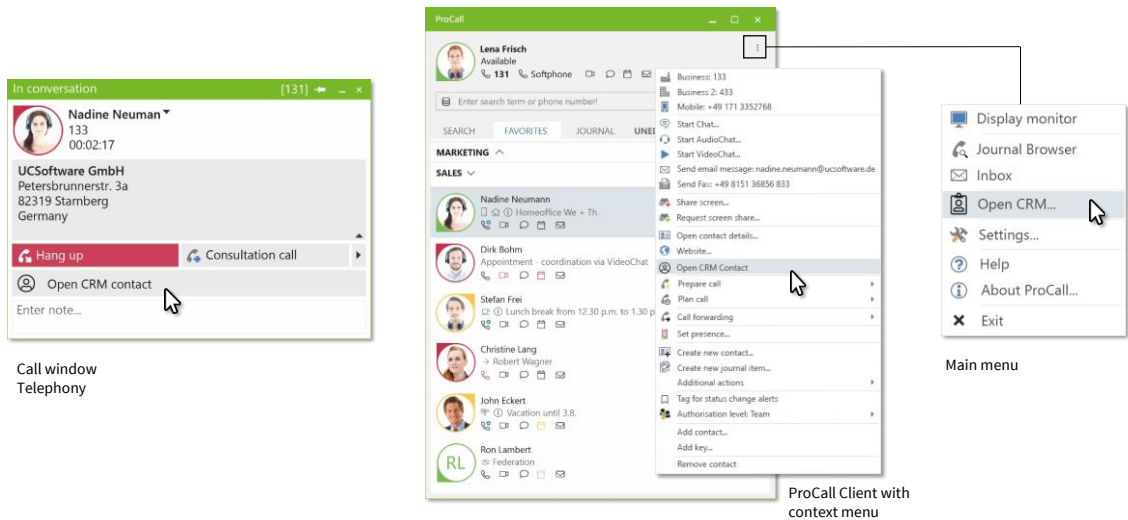

<https://www.youtube.com/watch?v=sk1B-xkOeJM>
Link to estos YouTube channel by clicking on the slide

Integration of common CRM, ERP and industry solutions

Integration takes place within a few steps and is very easy to install. Once the business process integration is complete, the link to an external system – for example, a CRM system – **appears immediately in the call window** when an incoming call is received. With one click, for example, the CRM mask of the current call partner can be opened.

Call window or menu integration in ProCall

In addition to the integration of links in the call window, this also allows menu items to be easily added to the context menu and the main menu of the ProCall Enterprise client.

Integration options according to customer needs

Without MetaDirectory

Contact data integration
via MetaDirectory

Simple
business process integration
with ProCall Enterprise

Complex
business process integration
as a service

The customer's requirements determine the **depth of integration**. This can vary from a **simple contact data integration** with MetaDirectory, through the new **configurable simple business process integration**, to **complex individually programmed integrations**.

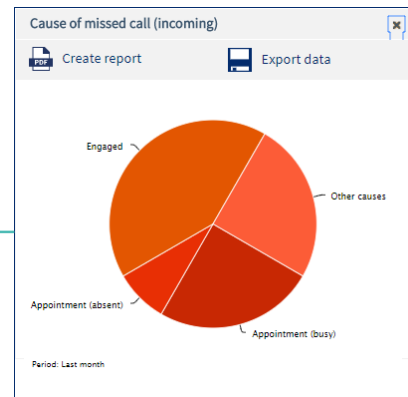

The advantage: Customers can start with basic contact data integration and gradually go deeper.

Drill down function

Unaccepted connections

Detailed information about the unaccepted connections

The **service level** is the most important key figure for a company's availability by telephone. How many seconds did it take for a call to be answered and how many of them were not answered at all? The **drill down function** provides a company with even more detailed information about why calls were not answered. For example, was it predominantly because employees were all busy on calls or were most of them in an appointment and therefore unable to answer? Here again, a company can find entry points to better plan its future personnel levels.

**makes operation and
administration simple**

Companies must constantly adapt to **changes in the market** and new **technological requirements**. A **globalized economy** and ever-changing **national and international laws** demand a rapid response capability. **Social change** is transforming organizations. ProCall 7 Enterprise offers different possibilities to react to these circumstances in an uncomplicated and simple way within the communication solution.

Installation & configuration

Easy to install

Microsoft Active Directory connection

- Users and groups
- Group policies (templates)
- Snap-in

- native client for macOS

Employees on the move

- native apps for Android and iOS

Prospective clients, partners or customers

- Contact portal
- Multimedia business card

ProCall Enterprise at a glance

Computer Telephony Integration (CTI)

CTI simplifies your day-to-day work steps and reduces sources of error. The telephone is controlled by the PC.

Softphone Functions (SIP)

The integrated SIP compatible softphone allows employees to talk directly over the PC. Uncomplicated and safe, even on the move.

Audio/Video Communication (WebRTC)

Based on the internet technology WebRTC (Real Time Communication), you benefit from easy face-to-face communication regardless of distance.

Contact portal/Multimedia Business Card

The company website becomes the medium of interaction for your customer. With text, audio and audio/video chats. Cloud-ready thanks to estos UCCconnect.

Screen Sharing

The simple screen sharing allows you to view and work on documents with your call partner.

Federation

Networking via federation allows you to securely exchange information beyond your company's borders.

Integration with Bluetooth

In addition to CTI for your desktop phone, ProCall Enterprise also offers CTI functions for smartphones and Bluetooth enabled mobile phones. As simple as in a car.

Instant Messaging (Chat)

Easily share text messages with colleagues or customers, or pass on important information quickly and straight away.

Presence Management

View your colleagues' availability at a glance and choose the appropriate communication method.

Business Process Integration (CEBP)

Go one step further and integrate the communication functions into your company's business processes. This creates added value.

Unified Messaging Integration

Integrate Unified Messaging Services such as fax, voice mailbox, and SMS text messaging into ProCall Enterprise for additional communication functions.

MultiSite

Connect different office locations to the same UCServer. Presence and contact information can be viewed across branches.

MultiVendor

Integrate different telephone systems from various manufacturers into one application, whether from the cloud or on the premises.

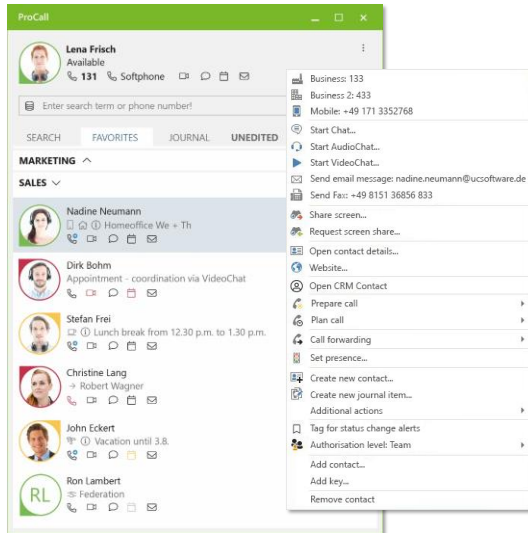

MultiDevice

MultiDevice means that ProCall Enterprise is platform-independent and device-spanning, and also offers native clients for macOS, iOS and Android.

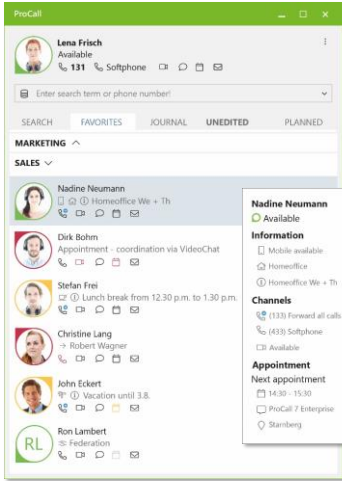

Employees in the company/home office

Native client for Microsoft Windows

- Presence management with calendar integration
